

Relay CRM – Executive Summary

Problem 70% of lost sales deals don't end with "no" — prospects simply stop replying. Traditional CRMs fail to distinguish between a ghosted lead and a warm lead, causing pipeline leakage and missed revenue.

Solution Relay CRM is a lean, high-velocity CRM designed to eliminate pipeline leakage. It automatically tracks lead decay, flags high-risk deals, and prioritizes daily follow-ups. With a Supabase backend, all lead data is persistent, editable, and actionable.

Key Features

- Kanban pipeline and list view for leads
- Real-time metrics: pipeline value, won revenue, average score, hot leads
- Lead scoring indicators (Hot, Warm, Cool, Cold)
- Editable deal values with database persistence
- Add, update, delete, and search leads
- Detailed lead panel with contact info and notes

Technology

- Backend: Supabase (PostgreSQL + Auth + API)
- Frontend: Bolt (React-style UI builder)
- Deployment: Bolt hosting

Impact Relay CRM transforms stalled conversations into closed revenue by giving sales teams a simple, sharp workspace that highlights exactly who to follow up with each day.
